Add the office printer to your Mac

IT Help Desk · Updated 2026

Follow these steps to add a printer. You don't need to install a driver for most printers; your Mac finds one automatically.

1. Open **System Settings**, then click **Printers & Scanners** in the sidebar.
2. Click the **Add Printer, Scanner or Fax…** button.
3. Pick your printer from the list and click **Add**.
4. To check it was added, open Terminal and run:

   ```
   lpstat -p
   ```

   You should see your printer's name.
